PREFACE

In this publication there is presented for the twelfth consecutive year comprehensive financial and operating information on every important privately owned electric utility operating in the United States The information was taken from the Annual Reports of class A and class B privately owned electric utilities to the Federal Power Commission for the year 1948 The form of report prescribed for utilities in the above classes, generally those which had annual electric revenues of \$250,000 or more, is based upon the Commission's Uniform System of Accounts

The schedules contained in this report consist of Balance Sheets, Income and Earned Surplus Statements, Capital Stock and Bonds, Electric Operating Revenues, Customers, and Sales by Classes of Service, Electric Operating Expenses, Utility Plant, and Physical Quantities. It will be noted by those familiar with this publication that in the present volume the sections devoted to Electric Operating Expenses and Utility Plant have been expanded to include considerably greater detail than was available

in previous editions.

The schedules are based upon statements of accounts and statistics submitted by respondents in their reports to the Commission and present the accounts of individual respondents only; they do not consolidate the accounts of parent and subsidiary companies In the financial schedules cents have been omitted and in the energy account the unit used is thousands of kilowatt-hours, both without rounding; therefore, the various items shown will not necessarily add to the totals and subtotals in which they are included

The uniformity of treatment accorded the statements of respondents in the tabulations contained in the report will generally permit ready comparison of items among the various utilies included in the compilation Such statements are filed by all class A and class B electric utilities whether or not sub-

ject to the jurisdiction of this Commission in respect

to accounting.

The uniform system of accounts prescribed by the Commission for use by electric utilities under its jurisdiction was prepared in cooperation with the National Association of Railroad and Utilities Commissioners and is in all essential respects identical with the system approved by that body mated that in excess of 90 percent of the electric utility industry, on the basis of plant, conforms its accounting to one or the other systems of accounts

SUMMARY

At the beginning of 1948 there were 321 class A and class B privately owned electric utility companies operating in the United States — As a result of mergers and sales during the year, this number had been reduced to 315 at December 31, 1948 — Comprehensive financial and operating information on all companies in the above classes which operated during 1948 is included in this volume — Composite financial and operating statements of the companies included in the report are shown and briefly commented upon

in the following summary

The combined total assets of the 315 privately owned class A and class B electric utilities operating in the United States at the end of the year amounted to \$17,346,922,610. The foregoing amount reflects the statement of reserves for depreciation and amortization on the debit side of the balance sheet as deductions from the book cost of utility plant, a departure from the previous practice of stating such reserves on the credit side of the balance sheet. Net utility plant inclusive of nonelectric utility property amounted to \$13,897,497,521. Total utility revenues of the above companies for the year 1948 were \$4,830,154,352. It is estimated that these larger companies comprise, both on the basis of assets and of revenues, in excess of 98 percent of the privately owned electric light and power industry.

Total electric operating revenues were \$4,167,-285,158. Of this amount \$4,115,561,118, or 98 8 percent, constituted revenues derived from sales of electric energy aggregating 251,774,653,000 kilowatthours to an average number of 32,200,917 customers. Other electric revenues amounted to \$51,724,040 or 12 percent of total electric revenues. Total electric operating revenue deductions, including operation, maintenance, taxes, and depreciation and amortization, amounted to \$3,388,111,690 or 81 3 percent of

revenues

It should be noted that no attempt has been made in this compilation to consolidate, in the technical accounting sense, the accounts of the companies included. The combined totals represent merely the sum of all accounts as reported by the individual companies. Consequently, duplications exist to a limited extent in the composite totals shown in the several statements. Total assets, for example, include intercorporate investments and receivables, and the totals for operating revenues and kilowatt-hours include intercorporate sales.

As a result of mergers, consolidations, sales of properties to public authorities, and the introduction of companies which in earlier years had electric revenues of less than \$250,000 annually, the dollar figures presented in the statements are not representative from year to year of exactly the same properties. However, the various balance sheet and income account ratios obtainable from the statements are essentially comparable, and tables of such ratios are presented following the statements.

COMPOSITE BALANCE SHEET

A condensed statement of the combined balance sheets of the electric utilities included in the compilation is shown in table 1. For purposes of this statement limited amounts of utility plant and reserves

for depreciation reported unclassified as to utility departments have been assigned to the electric and other utility departments on the basis of estimates

The aggregate of the utility plant accounts of the companies at the end of 1948 was \$17,756,583,078, consisting of \$15,512, 674,222 electric utility plant and \$2,243,908,856 other utility plant. For all utility operations the book investment in plant per dollar of annual revenue amounted to \$3.68. As between electric operations and other utility operations the plant-revenue ratios were \$3.72 and \$3.39, respectively.

Reserves for depreciation and amortization of utility plant were \$3,859,085,557, or 217 percent of utility plant. After deduction of such reserves utility plant amounted to \$13,897,497,521 and con-

stituted 80 1 percent of total assets

The combined total of current assets amounted to \$1,985,205,660 and was 146 times current habilities of \$1,359,689,863

Outstanding securities of the companies aggregate \$14,123,040,004 including \$4,225,670,109 common capital stock, \$2,178,700,713 preferred capital stock, and \$7,718,669,182 long-term debt. The combined surplus accounts of the companies aggregated \$1,410,923,253. Common stock represented 28.0 percent of total capital stock, long-term debt, and surplus, preferred stock 13.9 percent, long-term debt 49.1 percent and surplus 9.0 percent

The composite ratio of long-term debt to gross utility plant was 43 5 percent and to net utility plant

55 5 percent

In table 2 the above balance sheet ratios are shown in comparison with those of the 10 preceding years

COMPOSITE INCOME ACCOUNT

As shown in the condensed summary of income accounts appearing in table 4, utility operating revenues of the companies included in the compilation aggregated \$4,830,154,352 for the year 1948 Of this amount electric revenues constituted \$4,167,-285,158 or 86.3 percent, and revenues from other utility operations \$662,869,193 or 13 7 percent

Electric operating expenses, including maintenance, amounted to \$2,327,226,442 or 55 8 percent of electric revenues Depreciation and related charges amounted to \$358,831,470, or 8 6 percent of electric revenues and were equivalent to 2 3 percent of electric plant. Taxes in the amount of \$702,053,778 accounted for 16 9 percent of electric revenues. Total electric operating revenues deductions amounted to \$3,388,111,690 and the composite ratio of such total deductions to electric operating revenues was \$1.3 percent.

Total operating revenue deductions for all utility services were \$4,005,565,416 or 82 9 percent of total operating revenues Total depreciation and related charges amounted to \$403,072,992 representing 8 3 percent of total operating revenues and 2 2 percent of total utility plant. Total taxes for the year were \$776,642,926 or 16 1 percent of total utility operating

revenues.

Utility operating income was \$829,784,895 or 172 percent of revenues Gross income for the year, including miscellaneous income of \$65,766,336, was \$895,551,231.

Total income deductions, including interest on long-term debt, amortization of debt discount, premium, and expense, and other interest and miscellaneous charges, were \$238,743,060 On an over-all basis, these charges were carned 3 7 times Interest on long-term debt amounted to \$211,797,457, or 4 4 percent of revenues and was earned 4 2 times

The aggregate net income of the companies included in the compilation was \$656,808,171 for the year 1948. Appropriations for dividends on preferred stock totaled \$98,297,232, which amount equaled 2.0 percent of revenues and 150 percent of net income Appropriations for dividends on common stock were \$394,848,829, or 82 percent of revenues and 60.1 percent of net income. Total appropriations for dividends amounted to \$493,-146,061 equaling 75.1 percent of net income

GEOGRAPHIC DISTRIBUTION

The data pertaining to the individual utilities included in the compilation are arranged geographically by States. As a matter of interest the totals of utility plant and utility operating revenues by States and geographic divisions, together with the percentage relationship of each of the State and divisional figures to national totals, are presented in table 7

The figures in the tabulation are approximate for the reason that in some cases utilities operate in more than one State. In such cases utility plant and operating revenues have been included in the State in which the larger portions of electric operations of the respective companies are located.

Table 7 -Privately owned class A and class B electric utilities in the United States

It is of interest to note that 131 percent of the total 1948 utility revenues of the privately owned electric utility industry, as represented by class A and class B utilities, were received by companies operating in New York State. Pennsylvania ranked second with 83 percent, Illinois third with 7.7 percent, California fourth with 7.3 percent, and Ohio fifth with 67 percent. These five States accounted for 43.1 percent of total revenues. No other State accounted for as much as 5 percent of the total. Twenty-two States account individually for less than 1 percent of total revenues and in the aggregate for about 9.7 percent.

On the basis of utility plant, 7 8 percent of the industry is located in New England, 25.1 percent in the Middle Atlantic States, and 23.9 percent in the East North Central region. In total, 56.8 percent of the privately owned industry, on the basis of utility plant, is concentrated in the heavily populated and industrialized northeastern portion of the country. An additional 14 4 percent is situated in the South Atlantic and East South Central divisions. In total, 71.4 percent of the privately owned industry is contained in the area east of the Mississippi River.

The Pacific division accounts for 9 4 percent of the utility revenues of class A and class B private electric utilities and 12 3 percent of the utility plant of such companies The balance of the industry, accounting for 16 2 percent of the revenues and 16.5 percent of the plant, is extended over the West Central and

Mountain divisions of the country

COMPOSITE ELECTRIC OPERATING REVENUES

The statement in table 8 presents the combined electric operating revenues, kilowatt-hour sales, and number of customers, segregated according to classes of service, as reported by the electric utilities included in the compilation

Table 8 —Privately owned class A and class B electric utilities in the United States

Total electric operating revenues	4, 167, 285, 158	100 0

It will be seen that during 1948 the companies included in the compilation served an average of 25,893,928 residential or domestic customers. These customers constituted 80 4 percent of the total number of customers served Revenues from this class of service aggregated \$1,211,860,746 or 29 1 percent of total electric operating, revenues and were derived from the sale of 39,582,229,000, kilowatt-hours, constituting 15 7 percent of total kilowatt-hour sales. The average annual number of kilowatt-hours sold per residential customer was 1,529, the average annual bill was \$46 80, and the average revenue per kilowatt-hour sold was 3 06 cents

Commercial and industrial sales made to 4,420,799 customers, comprising 13 7 percent of the total number of customers served, accounted for 140,009,189,000 kilowatt-hours or 55 6 percent of total kilowatt-hour sales. Revenues from this class of service aggregated \$2,148,427,232 or 51 6 percent of total electric operating revenues. The average annual number of kilowatt-hours sold per commercial and industrial customer was 31,671, the average annual bill was \$485 98 and the average revenue per kilowatt-hour sold was 1 53 cents

Rural service was supplied to 1,762,416 customers, or 5.5 percent of the total number of customers served. It should be noted, however, that the system of accounts provides that rural sales include only revenues from service supplied under distinct rural or farm rates. Consequently, the above number of customers does not in general include rural in table 9

customers served under other than such rates. Revenues from rural service amounted to \$153,602,630 representing 3 7 percent of total electric operating revenues, and were derived from the sale of 7,021,020,000 kilowatt-hours, or 2 8 percent of the total kilowatt-hours sold

The above three customer groups, residential or domestic, rural, and commercial and industrial include 99 6 percent of the total customers served, and account for 74 1 percent of total kilowatt-hour sales and 84 4 percent of total electric operating revenues

Sales to other electric utilities aggregated 48,756,517,000 kilowatt-hours, or 19 4 percent of total kilowatt-hour sales, and accounted for \$388,222,892 or 9 3 percent of total electric operating revenues. It may be noted that inclusion of intercorporate sales in this class of service gives rise to the major portion of duplications in operating revenues and kilowatt-hour sales to which previous reference has been made.

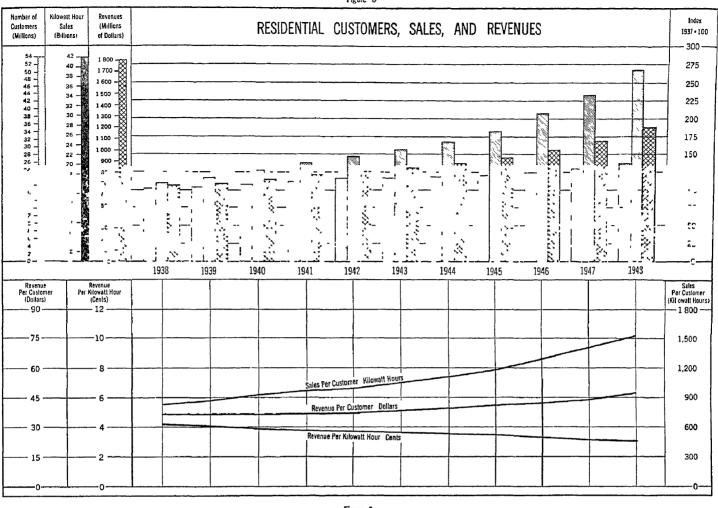

Other customer groups included in the revenue compilations were public street and highway lighting, interdepartmental, and "others." However, these five groups combined accounted for only 0 4 percent of total customers, 6 5 percent of total kilowatt-hours sold and 5 1 percent of total electric operating revenues

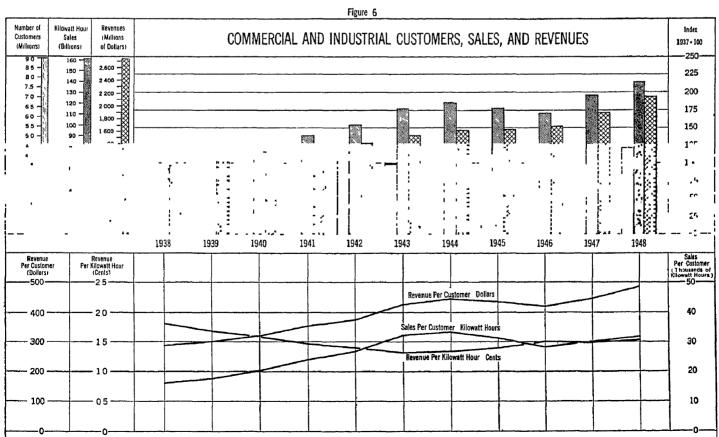

The tendencies of electric operating revenue ratios during the years 1938 to 1948, inclusive, are shown in table 9

Table 10 -Electric consumers, sales, and revenues

COMPOSITE ELECTRIC OPERATING EXPENSES

Section V presents electric operating expenses for the year 1948 as reported by the companies included in the compilation. Such expenses do not include depreciation, amortization, and taxes. As noted in the Preface this Section of the report has been expanded to include considerably more information than was contained in previous editions.

Items are presented in sufficient detail to show separately the cost of operating and maintaining the several functional divisions of electric utility plant. As such expenses possess considerably more significance when related to the physical characteristics of the respective functional divisions of plant, reference may be made here to Section VII, Physical Quantities, which presents information on generating stations, energy generated and purchased, transmission lines and substations, and distribution systems

In table 11 is shown a condensed statement of the combined electric operating expenses of the companies included in the compilation. Certain ratios based on data contained in the statement are shown in table 12. As a matter of interest certain average unit costs are also shown in the statement. However, since these over-all averages reflect composite costs of operating individual utility systems having widely divergent physical characteristics and operating conditions, they should not be considered as criteria to be applied in any particular case.

As indicated in the statement, the total electric operating expenses of the companies aggregated \$2,327,226,442 or 55 8 percent of electric operating revenues. Maintenance charges constituted \$293,-652,893 or 12.5 percent of these expenses and were equal to 6 9 percent of electric operating revenues. As previously stated, depreciation and related charges amounted to \$358,831,470 or 8.6 percent of electric operating revenues. Depreciation and maintenance charges, therefore, aggregated \$652,484,363 and the composite ratio of such charges to operating revenues was 15 5 percent.

Production expenses, which constitute the most important group of operating expenses, amounted to \$1,431,779,965 representing 61.5 percent or more than one-half of the total Production maintenance charges aggregated \$124,608,409 or 8.7 percent of

total production expenses Total production expenses, including purchased power, averaged 5 70 mills per kilowatt-hour sold

Expenses for steam power, the most important group of production expenses, amounted to \$1,003,-487,622 or 70 0 percent of total production expenses Fuel cost of \$766,064,240 accounted for 76.3 percent of total steam power production expenses. Cost of maintenance of steam production plant constituted \$109,488,838 or 10.9 percent of steam power production expenses. Hydraulic power production expenses accounted for 3 2 percent of the total production expenses and aggregated \$45,589,700 of which amount maintenance charges constituted \$12,797,574

or 28 1 percent Internal combustion engine power production expenses were \$12,649,872 or 0 9 percent

of total production expenses.

Cost of purchased power amounted to \$352,307,935 or 24 6 percent of total production expenses. It will be seen that purchased power was the second largest item of production expenses, however, it may be noted that this item consists largely of intercorporate purchases, thus giving rise to duplication in the composite production expenses of the reporting companies

The expenses of operating and maintaining the transmission facilities of utility systems are, in general, relatively small as compared to the costs of production. The companies included in the compilation reported transmission expenses for the year 1948 aggregating \$64,292,125 representing an over-all ratio of 4.5 percent to total production expenses. A substantial proportion of transmission expenses is represented by the costs of maintaining transmission facilities, as indicated by the fact that maintenance

charges applicable to such facilities for the year 1948 amounted to \$24,334,573 equal to 37 9 percent of the total transmission expenses of the reporting companies. The above total of transmission expenses constituted only 2.8 percent of total operating expenses, and the over-all average amount of transmission expenses per kilowatt-hour sold was 0.26 mills

Distribution expenses, which constitute the second largest operating expense group, amounted to \$363,873,517 or 15 6 percent of the total expenses of the reporting companies for the year 1948. As in the case of transmission expenses, a substantial proportion of distribution expenses, 37.1 percent, is represented by the cost of maintaining distribution facilities. By relating distribution expenses to the average number of customers served, it is found that the over-all average expense per customer was \$11.30. The aggregate of transmission and distribution operating expenses was \$428,165,642. Thus the operating expenses attending delivery of power constituted an amount equivalent to 29.9 percent of the expense of production.

Customers' accounting and collecting expenses of the companies included in the compilation amounted to \$137,509,853. These expenses, which include meter reading, collecting, customers' billing and accounting, and uncollectible accounts, amounted to 3 3 percent of total operating revenues, and 5 9 percent of total operating expenses. The over-all average amount of such expenses per customer was \$4 27. Sales promotion expenses, which include demonstration, advertising, and other sales expenses, accounted for 1 6 percent of total operating revenues and 2.9

Administrative and general expenses reported for the year 1948 amounted to \$262,140,642 and equal 11 3 percent of total operating expenses. This classification, which represents the third largest group of operating expenses, includes salaries and expenses of general officers, executives, and other general office employees, general office supplies and expenses, management and supervision fees and expenses, legal services, insurance, maintenance of general property, and other miscellaneous expenses. The ratio of such expenses to total operating revenues of the reporting companies for the year 1948 was 6 3 percent.

For purposes of comparison, electric operating

For purposes of comparison, electric operating expenses ratios for the years 1938 through 1948 are

presented in table 12

¹ Total maintenance, amount included in functional account groups

UTILITY PLANT

Section VI provides for detailed statements of utility plant, as of December 31, 1948, for each company included in the compilation. As with Section V, Electric Operating Expenses, this Section of the report has been expanded to include considerably more plant detail than was shown in

previous editions

It will be seen that the schedules in this section provide for a departmental statement of balances in plant accounts, by major classifications, for electric, gas, and other utility departments and for a detailed statement according to functional groups of combined electric utility plant in service and in the process of reclassification. The amount of utility plant which was not classified according to utility departments, as of December 31, 1948, is shown at line 34 as unclassified and undistributed while balances of electric plant which were not classified according to functions are shown at line 104 and appropriately footnoted. Additions and retirements of electric plant according to functional classifications are also shown

PHYSICAL QUANTITIES

The items contained in the schedules in section VII are designed to classify and to express quantitatively the principal physical characteristics of the electric utility facilities in respect of which there are presented in the preceding sections of the report details of operating revenues, operating expenses, and plant investment.

The schedules provide for the classification of each company's generating stations according to

Table 14 —Privately owned class A and class B electric utilities in the United States

type of prime mover and according to installed capacity, the latter classification permitting observation of the capacity of individual generating plants within narrow limits. The amount of energy generated by each type of prime mover is also

shown, as well as the amount of energy purchased

and interchanged.

Transmission lines are classified according to voltage and type of supporting structure. The length of line is reported in structure and circuit miles for steel-tower lines. Substation capacity is classified according to functional character, i. e., transmission or distribution. Distribution systems are described in terms of length of overhead lines in both pole and wire miles, underground lines in cable miles, number and capacity of line transformers, number of meters on customers' premises, and total number of meters. Information on street lighting and signal equipment is also shown

The combined installed generating capacity and the combined energy account of the companies included in the compilation are shown in tables 14 and 15, respectively.

Table 15.—Privately owned class A and class B electric utilities in the United States

Sales to ultimate consumers Sales for resale Interchange—out (gross) Used by company (excluding station use) and furnished without charge Losses	203, 018, 136 48, 756, 517 11, 601, 783 1, 428, 361 30, 148, 223

COMPOSITE FINANCIAL STATEMENTS 1938 THROUGH 1948

On this and the following four pages are shown composite statements of the balance sheet, income account, electric operating revenues, electric operating expenses, and electric energy account of the class A and class B privately owned electric utilities in the United States for the years 1938 through 1948 Mergers, consolidations, and sales of properties to

public authorities involving companies included in the annual compilations together with the addition of companies from time to time for which no adjustments have been made, exercise a limited effect upon the year-to-year comparability of the data contained in the statements
